The only textbook approved for use by NAEMT's Advanced Medical Life Support course, this guide provides comprehensive, evidence-based coverage of basic and advanced concepts with an emphasis on critical thinking, leading to better outcomes for patients. Submit your application to become a Course Site today.

Advanced Medical Life Support, Second Edition is the leading course for prehospital practitioners in the advanced medical assessment and treatment of commonly encountered medical conditions. Taught throughout the world since 1999, Advanced Medical Life Support (AMLS) was the first emergency medical services education program that fully addressed how best to manage patients in medical crises. AMLS is the only textbook approved for use by NAEMT's Advanced Medical Life Support course, which emphasizes the AMLS Assessment Pathway, the most important guide for assessing patients with medical conditions. The United Kingdom edition of AMLS is enhanced by: Key Features Critical thinking scenarios give students a genuine context for the application of the knowledge presented in the chapter, including a scenario solution. Students are able to assess, review, and discern the possible diagnosis of the patient. Chapter review questions, chapter summaries, and Putting It All Together sections reinforce key concepts and tie information together, helping students retain what they have learned. Endorsed by the National Association of EMS Physicians and the United Kingdom College of Paramedics, the course emphasises the use of the AMLS Assessment Pathway, a systematic assessment tool that enables healthcare practitioners to diagnose medical patients with urgent accuracy. Current Medical Content Coverage of basic and advanced treatment modalities incorporate the latest research developments that are suitable for both beginning and experienced prehospital care providers, emergency and critical care nurses, and emergency doctors. An Updated AMLS Assessment Pathway The revised AMLS Assessment Pathway provides a systematic approach to the assessment of a medical patient and even more direction for students at all levels of practice.

As the required textbook for NAEMTUs worldwide prehospital trauma life support courses, this is the definitive resource for learning basic and advanced prehospital trauma skills and concepts. Now revised and expanded to cover all aspects of military prehospital trauma with 12 new chapters, this edition is tailored expressly for the military.

Going above and beyond the new DOT curriculum, this book offers a high level—yet practical—approach to the assessment, diagnosis and treatment of the full range of adult medical emergencies. Each well-illustrated chapter discusses realistic methods that a seasoned EMS practitioner would use—moving from assessment-based procedures with initial management of the threats, to field diagnosis and management of treatable underlying causes. Includes real-world case studies. Assumes a familiarity with anatomy, physiology, and pathophysiology, and an overall understanding of the nature of medical emergencies. Assessment of the Medical Patient. Airway Management, Ventilation, and Oxygenation Therapy. IV Access and Medication Administration. Hypoperfusion (Shock). Dyspnea. Chest Pain. Altered Mental Status. Acute Abdominal Pain. Gastrointestinal Bleeding. Seizures and Seizure Disorders. Syncope. Headache, Nausea, and Vomiting. Case Studies. For EMTs, paramedics, nurses, and others involved in emergency medical care.

Written by medical experts and professionally narrated for easy listening, this crash course is a valuable tool both during school and when preparing for the USMLE, or if you're simply interested in basic and advanced cardiac life support. The audio is focused and high-yield, covering the most important topics you might expect to learn in a typical medical school basic and advanced cardiac life support course. Included are both capsule and detailed explanations of critical issues and topics you must know to master BCLS and ACLS. The material is accurate, up-to-date, and broken down into bite-sized sections. There is a Q&A and a key takeaways section following each topic to review questions commonly tested and drive home key points. In this course, we'll cover the following topics: Initial Assessment of the Unconscious Patient CPR Basics for Adults CPR Basics for Children and Infants Automatic Cardiac Defibrillator Use Advanced Life Support Rhythm Strip Interpretation Arrhythmia Algorithms ACLS Medications Pediatric Advanced Life Support Prehospital Trauma Assessment ATLS Protocols for Adults ATLS for Children and Infants Also included is a comprehensive test containing the top 100 most commonly-tested questions in BCLS and ACLS with the correct answers. AudioLearn's Medical School Crash Courses support your studies, help with USMLE preparation, and provide a comprehensive audio review of the topic matter for anyone interested in what medical students are taught in a typical medical school basic and advanced cardiac life support course.

Updated to meet the 2005 American Heart Association Guidelines Market: Emergency Medicine Technicians, Paramedics, Nurses, Physicians Quick-hit question & answer style reinforces facts for easy memorization -- only correct answers are given so wrong answers will never accidentally be remembered

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States.

Advanced Life Support (ALS)<sup>®</sup> is a set of life-saving procedures and expertises that expand Basic Life Support to additional aid the flow and supply an open airway and sufficient airing (breathing). Real-world patient cases (cleared of any patient identifiers) simulate the first year of coding on the job by using actual medical records, allowing students to practice coding with advanced material. UNIQUE! Evaluation and Management (E/M) audit forms include clear coding instructions to help reduce errors in determining the correct level of service. More than 150 full-color illustrations depict and clarify advanced coding concepts. From the Trenches boxes highlight the real-life experiences of professional medical coders and include photographs, quotes, practical tips, and advice.

For patients and their loved ones, no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. Dying in America evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for

people nearing the end of life.
