It seemed clear to me that Panksepp's affective neuroscience can provide a valuable foundation to emotion research. These are not entirely new ideas, but by presenting them in a comprehensive text on the neuroscience of emotion, Panksepp constructs a strong defense against the not uncommon view that emotions are 'illusory concepts outside the realm of scientific enquiry.'

[Affective Neuroscience: The Foundations of Human and ...](#)

Affective neuroscience examines how the brain creates emotional responses. Emotions are psychological phenomena that involve changes to the body (e.g., facial expression), changes in autonomic nervous system activity, feeling states (subjective responses), and urges to act in specific ways (motivations; Izard, 2010).

Selected Principles of Pankseppian Affective Neuroscience. In the early nineties of the twentieth century Jaak Panksepp coined the term "Affective Neuroscience" (AN) today being accepted as a unique research area in cross-species brain science. By means of (i) electrical stimulation, (ii) pharmacological challenges, and (iii) brain lesions of vertebrate brains (mostly mammalian), Panksepp carved out seven primary emotional systems called SEEKING, CARE, PLAY, and LUST on the positive side

[Selected Principles of Pankseppian Affective Neuroscience](#)

Jaak Panksepp was an Estonian neuroscientist and psychobiologist who coined the term "affective neuroscience", the name for the field that studies the neural mechanisms of emotion. He was the Baily Endowed Chair of Animal Well-Being Science for the Department of Veterinary and Comparative Anatomy, Pharmacology, and Physiology at Washington State University's College of Veterinary Medicine, and Emeritus Professor of the Department of Psychology at Bowling Green State University. He was known in t
