must be shown and correct to receive

Quadratic Functions represented through  
“Angry Birds ...

Using Angry Birds as a Context for Quadratic functions. One of the teachers I work with used Angry Birds as a context for learning about quadratic functions. Whenever they wanted to introduce a new topic, they referred back to the context of Angry Birds so as to give students a representation of quadratics with which the students may be familiar. Let's see what that could look like.

## Quadratic Functions

Yellow Bird's flight path can be modeled by the quadratic equation:  $y = -x^2 + 14x - 24$ . Max: 25 yards. Axis of symmetry: 7 yards. Distance traveled: 10 yards. Since the graph is given you just need to square the axis of symmetry (7) to get 49. Then you need to plug it into the vertex equation to get  $y = 13/49$   $(x-7)$   $(x-7)$
