Synopsis. Engineering

thermodynamics is the study of and  
practical application of the successful  
conversion of heat energy into work  
energy, a transormation fundamental  
to the existence of our modern  
industrial society. The thermodynamic  
conversion process lies behind the  
operation of the internal combustion  
engine and the generation of power.  
Transport systems - such as the motor  
cars, aircraft and railway trains - can  
only function because of this process;
