The brain is the most complex organ in our body. Indeed, it is perhaps the most complex structure we have ever encountered in nature. Both structurally and functionally, there are many peculiarities that differentiate the brain from all other organs. The brain is our connection to the world around us and by governing nervous system and higher function, any disturbance induces severe neurological and

psychiatric disorders that can have a devastating effect on quality of life. Our understanding of the physiology and biochemistry of the brain has improved dramatically in the last two decades. In particular, the critical role of cations, including magnesium, has become evident, even if incompletely understood at a mechanistic level. The exact role and regulation of magnesium, in particular, remains elusive, largely because intracellular levels are so difficult to routinely quantify. Nonetheless, the importance of magnesium to normal central nervous system activity is self-evident given the complicated homeostatic mechanisms that maintain the concentration of this cation within strict limits essential for normal physiology and metabolism. There is also considerable accumulating evidence to suggest alterations to

some brain functions in both normal and pathological conditions may be linked to alterations in local magnesium concentration. This book, containing chapters written by some of the foremost experts in the field of magnesium research, brings together the latest in experimental and clinical magnesium research as it relates to the central nervous system. It offers a complete and updated view of magnesiums involvement in central nervous system function and in so doing, brings together two main pillars of contemporary neuroscience research, namely providing an explanation for the molecular mechanisms involved in brain function, and emphasizing the connections between the molecular changes and behavior. It is the untiring efforts of those magnesium researchers who have dedicated their lives to unraveling the

This book examines the economics of the postal sector through three lenses: snapshot and trends, models, and opportunities. In the years to come, the Universal Postal Union plans to develop its role as a knowledge centre for the postal sector from these perspectives. At this time of radical

transformation of the postal sector, it is important to understand how the sector has evolved historically, how it is connected with the economic system, and where it is heading. This book thus first presents a long-run view, focusing on incumbent operators over the last three decades, and then describes their development in the last five to ten years. It also offers a real-time picture based on daily “big postal data”, revealing one of the greatest opportunities for the sector in terms of forecasting and product design.

This book proposes a simple framework for understanding the political economy of subsidy reform and applies it to four in-depth country studies covering more than 30 distinct episodes of reform. Five key lessons emerge. First, energy subsidies often follow a life cycle, beginning as a way to stabilize prices and reduce exposure to price volatility for low-income consumers. However, as they grow in size and political power, they become entrenched. Second, subsidy reform strategies vary because the underlying political economy problems vary. When benefits are concentrated, satisfying (or isolating) interest groups with alternative policies is an important condition for effective reform. When benefits are diffuse, it can be much harder to identify and manage the political coalition needed for reform. Third, governments vary

in their administrative and political capacities to implement difficult energy subsidy reforms. Fourth, improvements in social protection systems are often critical to the success of reforms because they make it possible to target assistance to those most in need. Finally, the most interesting cases involve governments that take a strategic approach to the challenges of political economy. In these settings, fixing energy subsidies is central to the governments' missions of retaining political power and reorganizing how the government delivers benefits to the population. These cases are examples of "reform engineering,"[†] where governments actively seek to create the capacity to implement alternative policies, depoliticize tariffs, and build credibility around alternative policies. The most successful reforms involve

active efforts by policy leaders to identify the political forces supporting energy subsidies and redirect or inoculate them.

Sentimentalism, sex, the construction of the modern body, and the origins of American liberalism all come under scrutiny in this rich discussion of political life in the early republic. Here Bruce Burgett enters into debates over the "public sphere," a concept introduced by Jurgen Habermas that has led theorists to grapple with such polarities as public and private, polity and personality, citizenship and subjection. With the literary public sphere as his primary focus, Burgett sets out to challenge the Enlightenment opposition of reason and sentiment as the fundamental grid for understanding American political culture. Drawing on texts ranging from

George Washington's "Farewell Address" and Charles Brockden Brown's Clara Howard to Hannah Foster's The Coquette and Harriet Jacobs's Incidents in the Life of a Slave Girl, Burgett shows that the sentimental literary culture of the period relied on readers' affective, passionate, and embodied responses to fictive characters and situations in order to produce political effects. As such, sentimentalism located readers' bodies both as prepolitical sources of personal authenticity and as public sites of political contestation. Going beyond an account of the public sphere as a realm to which only some have full access, Burgett reveals that the formation of the body and sexual subjectivity is crucial to the very construction of that sphere. By exploring and destabilizing the longstanding distinction between public and private life, this
