Let  $c$  be a critical number of a function  $f$  that is continuous on an open interval  $I$  containing  $c$ , if  $f$  is differentiable on  $I$  except possibly at  $c$ , then  $f(c)$  can be classified as followed: 1. If  $f'(x)$  changes from  $(-)$  to  $(+)$  at  $c$ , then  $f(c)$  is a relative minimum of  $f$ . 2.

That is the all-urpse linear approximation. Figure 3.1 shows the square root function  $y = \sqrt{x}$  and its tangent line at  $x = a = 100$ . At the point  $(100, 10)$ , the slope is  $1/2\sqrt{x} = 1/20$ . The table beside the figure compares  $y(x)$  with  $Y(x)$ . Fig. 3.1  $Y(x)$  is the linear approximation to  $y(x)$  at  $x = a = 100$ . The accuracy gets worse as  $x$  departs from 100. The ...

1. Locate Critical Numbers of  $f$  on  $(a, b)$ , and use these numbers to determine test intervals. 2. Determine the sign of  $f'(x)$  at one test value in each of the intervals. 3. Use the above Theorem to determine whether  $f$  is increasing or decreasing on each interval. Also valid when  $(a, b)$  is replaced by  $(-\infty, b)$ ,  $(a, \infty)$ , or  $(-\infty, \infty)$ .
