This presentation describes various aspects of the

# Access Free Chapter 10

## Blood Anatomy And

regulation of tissue oxygenation, including the roles of the circulatory system, respiratory system, and blood, the carrier of oxygen within these components of the cardiorespiratory system.

# Access Free Chapter 10 Blood Anatomy And

The respiratory system takes oxygen from the atmosphere and transports it by diffusion from the air in the alveoli to the blood flowing through the pulmonary capillaries. The cardiovascular system then

# Access Free Chapter 10 Blood Anatomy And

Physiology Coloring  
Workbook Answers

moves the oxygenated blood from the heart to the microcirculation of the various organs by convection, where oxygen is released from hemoglobin in the red blood cells and moves to the parenchymal

## Access Free Chapter 10

### Blood Anatomy And

cells of each tissue by diffusion. Oxygen that has diffused into cells is then utilized in the mitochondria to produce adenosine triphosphate (ATP), the energy currency of all cells. The mitochondria are

# Access Free Chapter 10 Blood Anatomy And

able to produce ATP until the oxygen tension or  $P_{O_2}$  on the cell surface falls to a critical level of about 4–5 mm Hg. Thus, in order to meet the energetic needs of cells, it is important to maintain a continuous supply

# Access Free Chapter 10

## Blood Anatomy And

of oxygen to the mitochondria at or above the critical  $P_{O_2}$  . In order to accomplish this desired outcome, the cardiorespiratory system, including the blood, must be capable of regulation to
