design and manage large construction projects.

This could include bridges, buildings, dams, tunnels, buildings, airports, water and sewage systems, transport links and other major structures. They use computer modelling software and data from surveys, tests and maps to create project blueprints.

These plans advise

contractors on the best course of action and help minimise environmental impact and risk.

Buildings and bridges are often the first structures to come to mind, because they are the most obvious engineering creations. But civil engineers are also responsible for less visible creations and contributions. Every time

the infrastructure necessary to support a civilized society. The Roman aqueducts, the great European cathedrals, and the earliest metal bridges were built by highly skilled forerunners of the modern civil engineer. These craftsmen of old relied on their intuition, trade skills, and experience-based design
