on a server allowed backup engineers to design robust storage solutions. CommVault software implements this design strategy through the use of storage policies. A storage policy allows data to be logically centralized and managed based on storage and retention needs regardless of whether the data itself is physically centralized or decentralized.

Good backup and recovery strategies are key to the health of any organization. Medium- to very-large-scale systems administrators have to protect large amounts of critical data as well as design backup solutions that are scalable and optimized to meet changing conditions. Pro Data Backup and Recovery will cover some of the more common backup applications, such as Symantec NetBackup/BackupExec, EMC NetWorker, and CommVault, but the main discussion will focus on the implementation of 21st century architectures that allow the backup software to be a “commodity” item. The underlying architecture provides the framework for meeting the requirements of data protection for the organization. This book covers new developments in

data protection as well as the impact of single-instance storage upon backup infrastructures. It discusses the impact of backup and data replication, the often misapplied B2D and D2D strategies, and “tapeless” backup environments. Continuous data protection and remote replication strategies are also addressed as they are integrated within backup strategies—a very important topic today. Learn backup solution design regardless of specific backup software Design realistic recovery solutions Take into account new data protection standards and the impact of data replication Whether you are using NetBackup, CommVault, or some other backup software, Pro Data Backup and Recovery will give you the information you need to keep your data safe and available.

Across entire verticals of the economy the new normal is the recurring revenue business. Charging customers on a monthly basis, firms with this model have to play by an entirely new set of rules, rules which generally favor the customer over the seller. But this new model also opens up fantastic opportunities to provide and extract more value from the relationship as well. To create that value business needs to move away from a hunting mindset to a farming mindset. That change is the new paradigm of Customer Success. Many business leaders have heard of Customer Success but few understand what it really means to run their business from the Customer Success standpoint. Even fewer have the experience to build the Customer Success function and optimize its performance. As a pioneer in the field of Customer Success, Guy Nirpaz is acknowledged as one of the earliest proponents of this business realignment. In
