~~Automotive News Tips~~

Backlash is the distance

Acces PDF Construction

(spacing) between two “ mating ” gears measured at the back of the driver on the pitch circle. Backlash, which is purposely built in, is very important because it helps prevent noise, abnormal wear and excessive heat while providing space for lubrication of the gears.

The pump casing guides the liquid from the suction connection to the center, or eye, of the impeller. The vanes of the rotating impeller impart a radial and rotary motion to the liquid, forcing it to the outer periphery of the pump casing where it is collected in the outer part of the pump casing

The steam condenser, shown in Figure below, is a major component of the steam cycle in power generation facilities. It is a closed space into which the steam exits the turbine and is forced

Acces PDF Construction

to give up its latent heat of vaporization. It is a necessary component of the steam cycle for two reasons.

Globe valves also have drawbacks. The most evident shortcoming of the simple globe valve is

Acces PDF Construction

the high head loss from two or more right angle turns of flowing fluid.

Obstructions and discontinuities in the flowpath lead to head loss. In a large high pressure line, the fluid dynamic effects from pulsations, impacts, and pressure drops can damage trim, stem packing, and actuators.

~~Automotive~~
The control of a diesel engine is accomplished through several components: the camshaft, the fuel injector, and the governor. The camshaft provides the timing needed to properly inject the fuel, the fuel injector provides the

Acces PDF Construction

component that meters and injects the fuel, and the governor regulates the amount of fuel that the injector is to inject.
