« Kluwer Technische Boeken, BV » (Deventer, The Netherlands) and « Russky yazyk Publishers » (Moscow, USSR) is to help the user read and translate English, German, French, Dutch and Russian texts in electrical engineering. Up until now all such dictionaries were containing terms pertaining directly to electrical engineering plus the terminology used in its off-sheets which have evolved into separate disciplines, such as communications, electronics, automation etc. Foremost, however, this Dictionary represents the terminology of electrical engineering, while the branches are represented by their basic terms only. Given the relative small volume (about 8000 terms), the authors tried to reflect the most important terms in

such areas as the circuit theory, electric and magnetic measurements, electric power generation, transmission and distribution, as well as the industrial and domestic consumption of electric power. The Dictionary also contains many terms relevant to high voltage technology, electrical machines and apparatus, electric drive, as well as to the elements and structures of aerial and cable transmission lines. In selecting English terms, the authors were trying to reflect both their British and American versions, although they did not attempt to present all terminological synonyms of this kind. In some cases the Dictionary provides the main spelling versions.

Development of methods and systems for language processing is therefore a worthy goal for national governments as well as for business entities and scientific and educational institutions in every country in the world. As work on systems and resources for the 'lower-density' languages becomes more widespread, an important question is how to leverage the results and experience accumulated by the field of computational linguistics for the major languages in the development of resources and systems for lower-density languages. This issue has been at the core of the NATO Advanced Studies Institute on language technologies for middle- and low-density languages held in Georgia in October 2007. This publication is a

collection - of publication-oriented versions - of the lectures presented there and is a useful source of knowledge about many core facets of modern computational-linguistic work. By the same token, it can serve as a reference source for people interested in learning about strategies that are best suited for developing computational-linguistic capabilities for lesser-studied languages either 'from scratch' or using components developed for other languages. The book should also be quite useful in teaching practical system- and resource-building topics in computational linguistics.
