The Environmental Science curriculum is designed enhance the following skills in students who complete the major: 1. Critical thinking and reading, scientific research, and writing (ranging from guided to independent). 2. Collection and analysis of qualitative and quantitative data in field, lab, and experimental contexts.

Franklin & Marshall - Environmental Science

Environmental science focuses on the relationships between people and Earth. Resources include water, soil, metallic and nonmetallic minerals, and energy. Renewable resources can be replenished over relatively short time spans. Plants, animals, and energy such as water, wind, and the sun are some examples of renewable resources.

Chapter 1 Introduction to Earth Science

Environmental science is a quantitative discipline with both applied and theoretical aspects and has been influential in informing the policies of governments around the world. Environmental science is considered separate from environmental studies, which emphasizes the human relationship with the environment and the social and political dimensions thereof.
