A ground-breaking 2005 exploration of multinational corporations that differs from other books on the subject by offering the reader a totally global perspective of multinationals without portraying them simply as economic entities. Written by experts on various aspects of the history, development, cultural and social implications of the multinational corporation, the book paints a compelling and coherent picture of the way these businesses affect almost all areas of our existence. As we might expect, the multinational company is shown to play a major role in the globalization that is reshaping so much of our lives.

Focusing on the use of microlithography techniques in microelectronics manufacturing, this volume is one of a series addressing a rapidly growing field affecting the integrated circuit industry. New applications in such areas as sensors, actuators and biomedical devices, are described.

Flat-Panel Displays and CRTs, a review of electronic information display devices, is the first systematic and comprehensive coverage of the subject. It is intended to distill our wealth of knowledge of flat-panel displays and CRTs from their beginnings to the present state of the art. Historical perspective, theory of operation, and specific applications are all thoroughly covered. The field of display engineering is a multidisciplined technical pursuit with the result that its individual disciplines suffer from a lack of communications and limited perspective. Many previously developed standards for, and general understanding of, one technology are often inappropriate for another. Care has been taken here to document the old, incorporate the new, and emphasize commonalities. Criteria for performance have been standardized to enable an expert in one display technology, such as liquid crystals, to compare his device performance with that offered by another technology, such as electroluminescence. This book has been written with a second purpose in mind, to wit, to be the vehicle by means of which a new scientist or engineer can be introduced into the display society. It is organized to be tutorial for use in instructional situations. The first chapters begin with first principles and definitions; the middle chapters set out requirements and criteria; and the last chapters give a complete description of each major technology.

East Asia is now one of the most dynamic parts of the increasingly regionalized world economy. This book explores the structure and upgrading mechanism of the highly integrated economy, reviewing the previous paradigm centered on Japan. The focal points are on the flying geese paradigm, the regional production networks, a reinterpretation of the East Asian crisis, the post-crisis transformation of the regional economy and a search for further regional cooperation. This volume aims at presenting, through these analyses, an alternative view for and a perspective on future East Asian regionalism. Chunji Yun is a researcher at Yamaguchi University (Japan).

Provides information on what a HDTV is, how to choose one, how to connect it to other equipment, programming choices, and adding accessories.
