Solutions - onlinemath4all

Solution. a. Let x be the age of John now. His age 13 years ago was $x - 13$ and his age nine years hence is $x + 9$.
 $x - 13 = \left(\frac{1}{3}\right)(x + 9)$ $x - 13 = \left(\frac{1}{3}\right)(x + 9)$
 $x + 3$ $x - \left(\frac{1}{3}\right)x = 3 + 13$ $\left(\frac{2}{3}\right)x = 16$
 $x = 24$. Final Answer: Therefore, John's age is 24 years old.

First, I'll need to name things and translate the English into math. Since my age was defined in terms of Will's, I'll start with a variable for Will's age.

Read Online Math Age Problems With Solution

To make it easy for me to remember the meaning of the variable, I will pick W to stand for "Will's age at the start, in the year 2000". Then Will's age in 2009, being nine years later, will be $W + 9$.
