A motorcycle engine is an engine that powers a

Read PDF Motorcycle Engine Basics

motorcycle. Motorcycle engines are typically two-stroke or four-stroke internal combustion engines, but other engine types, such as Wankels and electric motors, have been used. Although some mopeds, such as the VéloSoleX, had friction drive to the front tire, a motorcycle engine normally drives the rear wheel, power being sent to the driven wheel by belt, chain or shaft. Historically, some 2,000 units of the Megola were produced between 1921 ...

could be spray deodorant!
But it must be able to burn.
Two- It must be compressed,
that is under compression by
the piston.

MOTORCYCLE TECH 101 -

Reasons To Ride

Although all engines make torque, in general a "torque" engine is one that produces higher torque at lower rpm, while a "horsepower" engine makes large amounts of torque at higher rpm. A long-stroke engine tends to be torque-oriented, while a large-bore, shorter-stroke engine usually falls into the horsepower category.

the load. A service easily found at the track or at dealerships.

Motorcycle Horsepower Basics - All About Horsepower

An engine is composed of several major components; the block, the crank, the rods, the pistons, the head (or heads), the valves, the cams, the intake and exhaust systems and the ignition system. These parts work together in an exacting manner to harness the chemical energy in gasoline, converting many small and rapid combustion events into a turning motion that eventually spins your wheels and propels your car.
