CO2 Laser Cutting explains and describes how engineering materials are cut using a CO2 laser. Information is given on the cutting of metals and non metals on a wide range of levels from practical advice and processing parameters to explanations of the physical and chemical reactions which take place in the cut zone. In an effort to make the book as readable and informative as possible the subject is treated in a descriptive rather than a mathematical way. The benefit of CO2 Laser Cutting is twofold as it gives practical advice to the operator and technical advice to the researchers or scientist.

A "Sonderforschungsbereich" (SFB) is a programme of the "Deutsche Forschungsgemeinschaft" to financially support a concentrated research effort of a number of scientists located principally at one University, Research Laboratory or a number of these situated in close proximity to one another so that active interaction among individual scientists is easily possible. Such SFB are devoted to a topic, in our case "Deformation and Failure in Metallic and Granular Material", and financing is based on a peer reviewed proposal for three (now four) years with the intention of several prolongations after evaluation of intermediate progress and continuation reports. An SFB is terminated in general by a formal workshop, in which the state of the art of the achieved results is presented in oral or poster communications to which also guests are invited with whom the individual project investigators may have collaborated. Moreover, a research report in book form is produced in which a number of articles from these lectures are selected and collected, which present those research results that withstood a rigorous reviewing process (with generally two or three referees). The theme deformation and failure of materials is presented here in two volumes of the Lecture Notes in Applied and Computational Mechanics by Springer Verlag, and the present volume is devoted to granular and porous continua. The complementary volume (Lecture Notes in Applied and Computational Mechanics, vol. 10, Eds. K. HUTTER & H.

The volume contains the main papers presented at the 1994 EUROTOX Congress, Basel, Switzerland, August 21-24, 1994. Toxicology has become a less descriptive science because more importance has been placed on the mechanisms underlying toxic effects. This is reflected in symposia and workshops devoted to species differences in organ toxicity, receptor-mediated toxicity and stereochemical effects of xenobiotics. Recent progress in the fields of immunotoxicology, ecotoxicology, and neurotoxicology is highlighted and documented together with the present discussion on harmonized regulatory guidelines.

The definitive visual history of the tractor The complete history of farm machinery, from steam and vintage tractors to the latest combine harvesters is showcased in this lavishly illustrated volume. Packed with images and tractor data on more than 200 iconic machines, The Tractor Book explores the entire range of tractors and farming machines from around the world, such as Fordson Model F and Massey-Harris GP. Histories of famous marques, such as John Deere and Massey Ferguson, sit alongside immersive visual tours of celebrated machines. The Tractor Book covers how tractors work, their history, major marques and catalogues tractors from every era making this a must-have for anyone fascinated by these extraordinary machines.

This beautifully illustrated mini field guide is packed with information on 200 species of fungi found in Britain and the near Continent. The range covered demonstrates the incredible variety that exists within the world of fungi, from the better-known groups such as the boletes and russulas, to more esoteric and often strangely shaped types like bracket fungi, clubs, corals, puffballs, stinkhorns and elfcups. All the species are illustrated with superb full-colour artworks that show - where relevant - characteristics of shape and other aspects of appearance that change during their lives. A concise written account covers size, description, habitat and the season in which each fungus may be found. The easy-to-follow layouts and superb artworks aid quick and accurate identification, making this book an indispensable reference in the field as well as at home. It is compact enough to fit in the pocket, yet packed with essential information for the nature enthusiast. Renowned natural history artists including Cy Baker, David Daly, Colin Emberson and Lyn Wells painted the illustrations.
