Salesforce Visualforce Developer Guide

Introducing Visualforce. Over the past several years, Salesforce has created a comprehensive platform for building on-demand applications. Like other sophisticated application development platforms, the Lightning platform offers separate tools for defining: The structure of the data—that is, the data model. The rules that detail how that data can be manipulated—that is, the business logic.

Introducing Visualforce | Visualforce Developer Guide ...
Do not provide an easy way to give custom user interface elements the same look-and-feel as standard Salesforce pages. Require developers to enforce field uniqueness and other metadata dependencies on their own. Visualforce pages supersede s-controls.

Introducing Visualforce | Visualforce Developer Guide ...
Applying SLDS to Visualforce Pages You can use the Lightning Design System (SLDS) to build Visualforce pages that match the look and feel of the Salesforce mobile app. To use SLDS, it takes some tweaks in your code and a few things to remember. For the most part, Visualforce code that uses SLDS works without issue.

Visualforce Developer Guide - API Documentation, Developer ...
Visualforce is a framework that allows developers to build sophisticated, custom user interfaces that can be hosted natively on the Lightning platform. The Visualforce framework includes a tag-based markup language, similar to HTML, and a set of server-side "standard controllers" that make basic database operations, such as queries and saves, very simple to perform.

Visualforce tags are used to build high quality applications by
developers. Visualforce consists of a series of XML markup tags. These
tags are also called as components. Like Visualforce there are many
other development language like JSP, ASP.NET will also have tags which
serves as a container to the strucutre data returned by the
controller.

Controller Extension is an Apex Code that extends the functionality of
a Standard or Custom Controller.. When to Use Controller Extensions.
When we want to use the built-in functionality of a Standard
Controller but override one or more actions, like edit, view, save, or
delete.; When we want to add new actions. When we want to build a
Visualforce page that respects user permissions.
