The couple who travel the world recreating movie scenes

Robin Lachhein and Judith Schneider, both from Frankfurt, Germany, travel the world recreating movie scenes. After going on several big trips together as a couple, Robin Lachhein and Judith ...

The Funniest Scenes in the World is a valuable tool that is badly needed in today's fast-paced, competitive marketplace: a book of original scenes that are worthy of being performed for agents, managers, casting directors and network executives. A book of scenes that are worthy of being shot and broadcast on television and are formatted like proper scripts used by professional actors. Gunnar Rohrbacher is a writer, actor, director, producer and teacher who happens to also co-own Actors Comedy Studio in Los Angeles. ACS primarily teaches acting and audition technique for on-camera comedy; sitcoms, half- hours, dramedies, whatever term you like. Of note, we do two other things at ACS that are relevant to this collection of scenes: we host casting director workshops and produce student showcases. Many of the scenes in this book have been performed live in one configuration or another. A few are brand spanking new. Actors deserve a better choice than dated material that more often than not features an indelible performance by a notable actor. These scenes are designed to make you the star. The format is pretty simple - scenes are organized into the following categories: male/female, female/ female, male/male and gender neutral. The gender neutral scenes are also age neutral. Thus, each traditional category is made larger by the additional scenes that most anyone can perform. In addition, the scenes were all envisioned for the screen rather than stage. Some of them have been shot and produced and are viewable as MiniComs ? on our production site, ACSDigital.tv. Not all of the scenes in this book are represented there, but if you'd like to see some that were shot live in front of a studio audience (the laughter is real), with rehearsal, direction and terrific actors, please check them out.

The International Centre for Women Playwrights has collected an eclectic group of scenes excerpted from the work of contemporary playwrights around the world. This anthology offers drama teachers and their students acting resources that reflect the true diversity of the world we all inhabit. This anthology was designed as a vibrant alternative to the many popular, mainstream scene study books available today. Traditional publishing houses are often limited in the type of material they publish by the real -- or perceived -- lack of marketability of more "edgy" play scripts, plays that challenge contemporary social norms or tell the stories of under-represented cultural minorities. Because young people from these under-represented communities may think of theatre as an "elite" or "privileged" art form, we wanted to show them characters they can relate to -- distinct voices with diverse ethnicities, minority gender identities and socio-economic viewpoints that are often marginalized. These characters, and their stories, will make an indelible impact on students and teachers alike.

How did the earth look in prehistoric times? Scientists and artists collaborated during the half-century prior to the publication of Darwin's Origin of Species to produce the first images of dinosaurs and the world they inhabited. Their interpretations, informed by recent fossil discoveries, were the first efforts to represent the prehistoric world based on sources other than the Bible. Martin J. S. Rudwick presents more than a hundred rare illustrations from the eighteenth and nineteenth centuries to explore the implications of reconstructing a past no one has ever seen.

From the author of Losing Earth, a beautifully told exploration of our post-natural world that points the way to a new mode of ecological writing. We live at a time in which scientists race to reanimate extinct beasts, our most essential ecosystems require monumental engineering projects to survive, chicken breasts grow in test tubes, and multinational corporations conspire to poison the blood of every living creature. No rock, leaf, or cubic foot of air on Earth has escaped humanity's clumsy signature. The old distinctions—between natural and artificial, dystopia and utopia, science fiction and science fact—have blurred, losing all meaning. We inhabit an uncanny landscape of our own creation. In Second Nature, ordinary people make desperate efforts to preserve their humanity in a world that seems increasingly alien. Their stories—obsessive, intimate, and deeply reported—point the way to a new kind of environmental literature, in which dramatic narrative helps us to understand our place in a reality that resembles nothing human beings have known. From Odds Against Tomorrow to Losing Earth to the film Dark Waters (adapted from the first chapter of this book), Nathaniel Rich ' s stories have come to define the way we think of contemporary ecological narrative. In Second Nature, he asks what it means to live in an era of terrible responsibility. The question is no longer, How do we return to the world that we ' ve lost?It is, What world do we want to create in its place?
