Highly valued by both therapists and educators, Occupational Therapy: Performance, Participation, and Well-Being has been integral to the evolution of occupational therapy services and functions. Incorporated within this impressive third edition are new features and topics that shape the modern era in occupational therapy practice. Senior editors Charles H. Christiansen and Carolyn M. Baum, along with contributing editor Julie Bass-Haugen have worked collectively to go beyond the presentation of occupational therapy theories. The third edition uses a more learner-friendly approach by explaining how the theories apply in various practice settings. This format enables students, instructors, and practitioners to connect the crucial link between theory and practice. Charles H. Christiansen, Carolyn M. Baum, and Julie Bass-Haugen have organized the first section in a manner that first develops and then establishes a clear understanding of human occupation. Section Two makes explicit the Person-Environment-Occupation-Performance Model that can be used at an individual,

"Who Is God?" is a Bible Lesson Series that attempts to help the reader understand the character of God. This volume rethinks the work of Jacques Ellul (1912-1994) on the centenary of his birth, by presenting an overview of the current debates based on Ellul's insights. As one of the most significant twentieth-century thinkers about technology, Ellul was among the first thinkers to realize the importance of topics such as globalization, terrorism, communication technologies and ecology, and study them from

a technological perspective. The book is divided into three sections. The first discusses Ellul's diagnosis of modern society, and addresses the reception of his work on the technological society, the notion of efficiency, the process of symbolization/de-symbolization, and ecology. The second analyzes communicational and cultural problems, as well as threats and trends in early twenty-first century societies. Many of the issues Ellul saw as crucial - such as energy, propaganda, applied life sciences and communication - continue to be so. In fact they have grown exponentially, on a global scale, producing new forms of risk. Essays in the final section examine the duality of reason and revelation. They pursue an understanding of Ellul in terms of the depth of experience and the traditions of human knowledge, which is to say, on the one hand, the experience of the human being as contained in the rationalist, sociological and philosophical traditions. On the other hand there are the transcendent roots of human existence, as well as "revealed knowledge," in the mystical and religious traditions. The meeting of these two traditions enables us to look at Ellul's work as a whole, but above all it opens up a space for examining religious life in the technological society.

Each section of the book begins with a detailed introduction in which Zemke and Clark describe the relationship of each paper to the study of occupational science. This unique text provides an understanding of occupation that will give therapists a heightened concern for those activities in which their patients invest their energies and time, a better understanding of how participation in occupation shapes self-identity, a way to identify the motivating factors for participation in occupation, and knowledge of how patients can enhance their life opportunities.
