Drag cup tachogenerators are a less common type which use an aluminum cup rotating within a wound electromagnetic stator; the cup is attached to a shaft. Alternating current is supplied to one winding ...

Tachometer Generators and Tachogenerators Information

The majority of AC motors consist of two main components, a stator and a rotor. The stator is basically a metal ring with slots which hold coils of insulated wire containing a steel core. AC current ...

AC Motors Information

Some applications require a compact design; others in corrosive, extremely hot, or otherwise hostile environments necessitate that designs be free of additional wiring (for sensors or devices ...

Sensorless vector control

When applied to three-phase brushless motors, encoders often include three extra commutation signals (named U, V and W) that tell the driver when to switch current in the stator windings.
