The Type 4 engine explained The Type 4 engine broke new ground and was VW's most technically advanced powerplant to date when it made its debut in 1968. Vastly different in both appearance and design to the air-cooled Type 1 unit which we blogged about here, it still impresses today – not least for its silky power delivery.

*The Type 4 engine explained - Heritage Parts Centre*

Turn the ignition on, but do not start the engine. The lamp may or may not be lighting at this point, depending on the position of the points. Rotate the engine clockwise using the 22 mm wrench on the alternator pulley's nut, until the notch on the fan pulley aligns with the angle on the scale that you noted down on the previous step. If the crankcase is at TDCC (0° on the scale) and your idle timing advance spec is before TDCC, you will need nearly two clockwise revolutions of the ...

Often the cause of poor ignition is when your High Tension Leads or HT Leads as they are more commonly known are breaking down and need replacing. These HT leads are for use on all VW Baywindow Buses fitted with 1700cc, 1800cc or 2000cc Type 4 (pancake) engines and all early Type 25 Buses with 2000cc aircooled engines.

The smaller displacement Type 4 engines are only suitable for 411s and 914s. Even the purists can't help themselves from including a little cc boost during a rebuild. The stock Bosch L-Jetronic fuel injection is a dream compared to a set of carbs. There's nothing to adjust except for the idle mixture and it stays in tune.

The 050 has a different advance curve, and it's more suited for short rod engines (like the type 4), or engines with a bigger crank and shorter rod (78 stroke with Porsche length rods, etc). The Bosch 050 has not been made for a long time, finding tune up parts for it can be quite difficult, the Centrifugal Only Mallory Uniilite is the best "replacement" for the Bosch 050 Distributor.

Correct engine timing is crucial for getting top performance and life out of your engine. And if your ignition timing is off, your engine's life and performance will suffer. If you engine's ignition timing is retarded too much, you will have a hard time getting your engine to idle, have pronounced "flat spots" during acceleration and have a loss in overall power.

It is my understanding that the 009 distributor allows for only 21 degrees (just the distributor) and is not really the best thing for the type IV engine as far as driveability is concerned. I timed mine to have a maximum advance of 30 degrees on the engine when it is revved up (about 30 degrees btdc at 3000 rpm).
